

## WYDOT Data Interpretation

The Wyoming Department of Transportation compiles closure information for each department-maintained route on a monthly basis.

Please be aware of the following:

- WYDOT uses section-based reporting to indicate road conditions and road closures. The data shown indicates the worst-case closure scenario. If any section along a given route is closed, the entire route is treated as "closed".
- Closure data is shown as the percentage of hours the designated route is closed in a month. The number of hours varies based on the number of days in each month.
- Commercial vehicle closure data includes closures to light, high-profile vehicles due to strong winds.
- Closure data for passenger vehicles does not include strong-wind closures to light, high-profile vehicles.
- Data reflects full closures initiated by maintenance employees or Highway Patrol Troopers. Single lane closures or delays due to crashes that do not close the roads will not be reflected in the data.
- "Commuter hours" include weekends.
- The data does not include ramp closures or lane restrictions due to construction.
